

PBS Digital Releases TV Listings Manager

On October 24, PBS released its TV Listings Manager tool, providing a way for stations to modify their individual, local TV Schedule listings used within PBS Digital products. The TV listings are what people see when they come to their station's TV schedule on [PBS.org](https://www.pbs.org) or their station's localized version of [PBS.org](https://www.pbs.org). Currently, Rovi does not provide a method to deliver TV Listings Manager updates, so they can be distributed to other outlets such as TV Guide or Tivo. Therefore, updates made in TV Listings Manager will also need to be sent to Rovi. We are working with Rovi to remove this extra step and hope to have it released in the near future.
